

Your Package Includes:

- 1 lb. Bag of Fertilizer
- 1 lb. Bag of Dolomite
- 2 B/W Reversible Mulch Covers

STEP 1 | Remove Old Plants and Cover

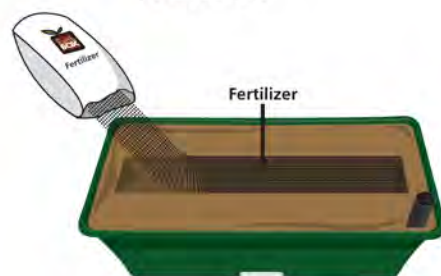

NOTE: To replant, cut off the old plants at the cover line. Remove the old cover.

STEP 2 | Dig Out Old Fertilizer

NOTE: Dig out the old fertilizer and any remaining large roots. Top off with fresh, pre-moistened, potting mix.

STEP 3 | Add New Dolomite & Fertilizer

NOTE: Mix Dolomite in top 3-4" of potting mix. Refer to the Plant & Fertilizer Placement chart to determine where to create a 2" trough for the new fertilizer.

STEP 4 | Cover Fertilizer Strip with Moist Growing Media

2" Mound Above Rim of Box

IMPORTANT: Create a 2" mound of growing media over the fertilizer strip.

STEP 5 | Place Cover on EarthBox®

NOTE: Place cover black side up. If peak growing season temperatures normally remain over 85° F, place cover white side up.

STEP 6 | Cut Holes in the Cover

IMPORTANT: Refer to Plant & Fertilizer Placement chart to determine the number and location of plants. Cut the holes the same size as the root ball of your plant.

STEP 7 | Plant Seeds or Seedlings

NOTE: Follow recommended planting instructions that come with your seeds or seedlings.

STEP 8 | Fill Reservoir and Water Regularly

NOTE: Use the fill tube to keep the water reservoir full. You'll know the reservoir is full when water flows from the overflow hole. Don't try to regulate the water level. Add water every few days when the plants are young, and at least once every day when your plants are mature.
